

## Garden City – City Hall Police Department Air Handler Replacement

### Addendum 1

1. All bids shall include an alternate price for quick shipping equipment.
2. All bids shall include base bid for work to be done during the week and an alternate price for weekend if there is a cost increase.
3. Per Carrier, the existing unit sits on an isolation curb. Before the curb adapter can be installed, the existing isolation rail will need to be modified to provide continuous support between the existing springs and not rely on the springs anymore. Then the curb adapter can be set in place. Install Structural Steel Tubes between existing springs, secure/weld the tube pieces in place and then adjust the springs all the way down so that the weight is not supported by the springs anymore. Coordinate all work with curb manufacturer and field conditions.
